Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

In the claims:

In claim 8, line 3, replace "tot he" by the words "to the".

In claim 12, line 4, replace "tot he" by the words "to the".

COMMENTS

Claims

The claims were amended so as to correct discrepancies therein.

Reasons For Allowance

The following is an examiner's statement of reasons for allowance: claim 1 defines a sewing machine including adjustable type needle interval means and adjustable le type loopers mounted on a looper stand and movable laterally beneath a needle plate. The sewing machine comprises a needle holder for accommodating a main needle and a second needle. The main needle is mounted to a main needle holder and the second needle is mounted to a sub needle holder, which is adjustable in position, by a setscrew. The needles are individually fitted to the needle holders and penetrate through needle holes of the needle plate when descending. The sub holder is adjustable for narrowing or widening the needle interval between the main needle and the sub needle. The fitting position of the sub needle holder relative to the main needle

holder is changed by a longitudinal slit formed linearly in the main needle holder and the arrangement includes at least two lateral cloth penetration lines, formed by the penetration of the two needles, arranged in a narrow width.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Pertinent Citations

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Laskey illustrates a needle bar having a double needle holder where the needles are adjusted relative to each other by the rotation of a setscrew. In one embodiment, the needle height is adjusted as well for allowing a single loop taker to accommodate both needles. Fink illustrates a hook and needle holder including a main holder for accommodating a hook and a sub needle holder where the sub needle holder accommodates an eyed needle and is adjusted by rotation of a setscrew. The sub needle is aligned with the hook and is moved toward and away from the hook and cooperates with a corresponding rotatable looper below the needle plate. Stein illustrates a multiple needle holder including means for adjusting pairs of needles. Shuffield illustrates a double needle holder including adjustable needles. Mizunuma illustrates a main needle holder and a sub needle holder.
